

Update on KLRs winter operations, 2017-2018

Kluane Lake Research Station will be open on request for winter operations in the 'off season' from November 1, 2017 through April 2018. Full-service research support (i.e. with a cook and staff on site) resumes mid-April 2018.

Facilities available for winter use are as follows

Accommodation: The Walter Wood building is available for winter use and will accommodate about 5 users and 1 AINA staff member. Additional users (larger groups) can be accommodated in cabins. Station users need to provide their own food, sleeping bag, and other personal gear. There will be pillows, pillowcases, and sheets for the beds.

Power: Electricity (generator) will be available for all multi-day bookings, and will be kept on while users are away from the site for several days, to ensure continued heat and power for instruments, samples, liquids, etc. Other lab space can be opened up on request, depending on requirements – please contact us to discuss.

Heating / Kitchen: Heating in the Wood building is available via wood stove and electrical heaters. Wood supplies have been stockpiled. Kitchen facilities in the Wood building include an electric cook top, microwave, toaster, and fridge. Kitchen supplies (bowls, plates, pots, utensils, etc.) will be available. There is no running water in the winter. The summer washroom and laundry facilities are not available. Two outhouses are available for users.

Internet, Phone: We have installed a new solar system, which will support year-round availability of internet and phone.

On-site support: AINA staff will be on-site or stopping by regularly to provide assistance as needed (with generators, wood, etc.).

Winter rates are \$25/day per person (Nov. 1, 2017 - March 31, 2018). Effective April 1, 2018, rates will rise to \$30/day per person. Please book through the online reservations system at <http://arctic.ucalgary.ca/make-klrs-reservation>.

As always, please contact us with any questions: arctic@ucalgary.ca or 403-220-7515.
